

Equipment Management

Visibility. Control. Profit. Get more out of your equipment assets with Sage 100 Contractor.

Construction companies large and small face the constant challenge of scheduling, maintaining, repairing, and replacing equipment. Attempting to manage these processes manually through generic spreadsheets and paper-bound processes is a hornet's nest. You're constantly playing catch-up with maintenance. Countless hours of productive use are lost. Equipment isn't properly charged to jobs. And a lack of analytics causes you to miss the opportunity to trade up before the equipment reaches the end of its life. Sound familiar?

Sage 100 Contractor offers a better way. The integrated **Equipment Management** add-on* module enables your firm to approach equipment management with an eye on maximizing productivity and profit. Daily field reports and in-depth analytics provide the visibility you need to:

- Build aggressive schedules that maximize productive hours.
- Service equipment at the right cycles.
- Allocate equipment costs directly to jobs.
- Optimize equipment ROI.

For more information on Sage 100 Contractor Equipment Management or to schedule a demonstration, contact your authorized Sage business partner or call **800-628-6583**.

*Add-on modules are sold separately.

Benefits

- Aggressively schedule equipment use to minimize unproductive hours
- Charge equipment costs directly to jobs, setting various rates
- Know where equipment is located
- Monitor utilization for owned and rented equipment
- Track idle time, down time, and productive time
- Manage maintenance and repair costs
- Maximize ROI by trading in or trading up at the right time

Sage 100 Contractor

Enhance the profitability and productivity of your equipment.

Features

Equipment Management is an add-on, integrated application for Sage 100 Contractor. It's designed to help you reduce costs, maximize productive equipment hours, and increase your visibility in equipment management.

Job allocation

Improve job cost data and job profitability analysis by allocating equipment costs to specific jobs.
