

eCommerce accounting made easier with A2X

sage | Accounting + a2X

How much time are you spending on managing eCommerce Accounting?

-  Manually downloading transactions from Shopify, eBay, Etsy, and Amazon
-  Uploading transactions to banking and accounting systems
-  Updating quotes for each client manually
-  Tracing back through transactions to find alignment errors where feeds do not reconcile
-  Resolving inaccurate margin calculations

Five ways A2X makes it easy

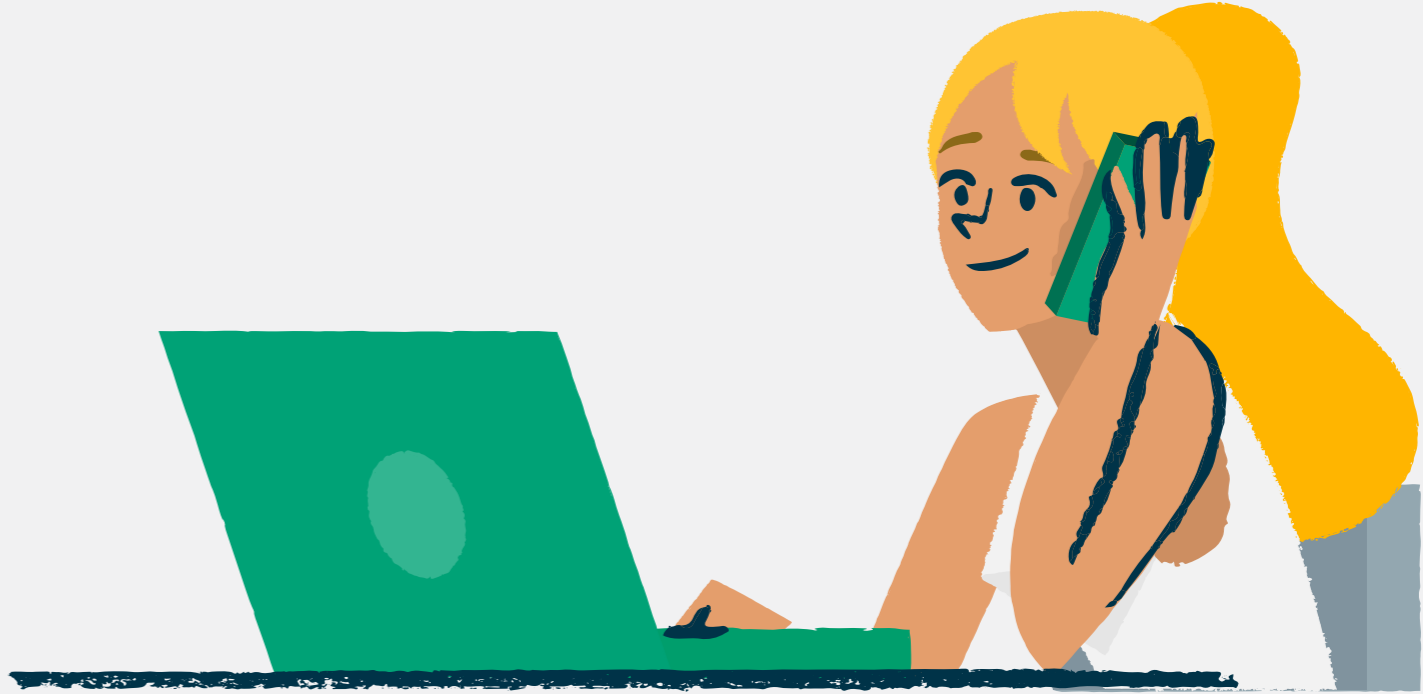

1 Your settlement or payout data flows into A2X

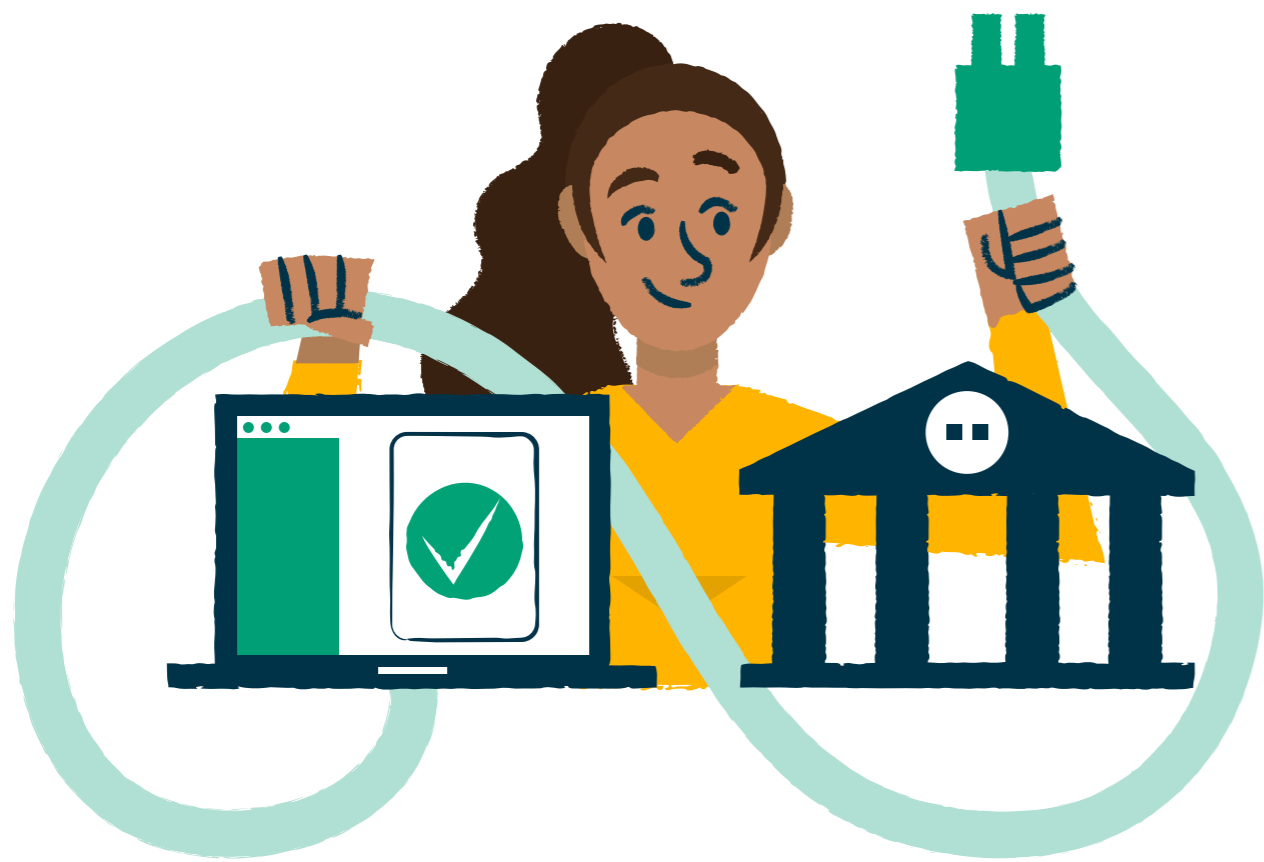

2 A2X organises the transactions into summary journal entries, that match the money you've received

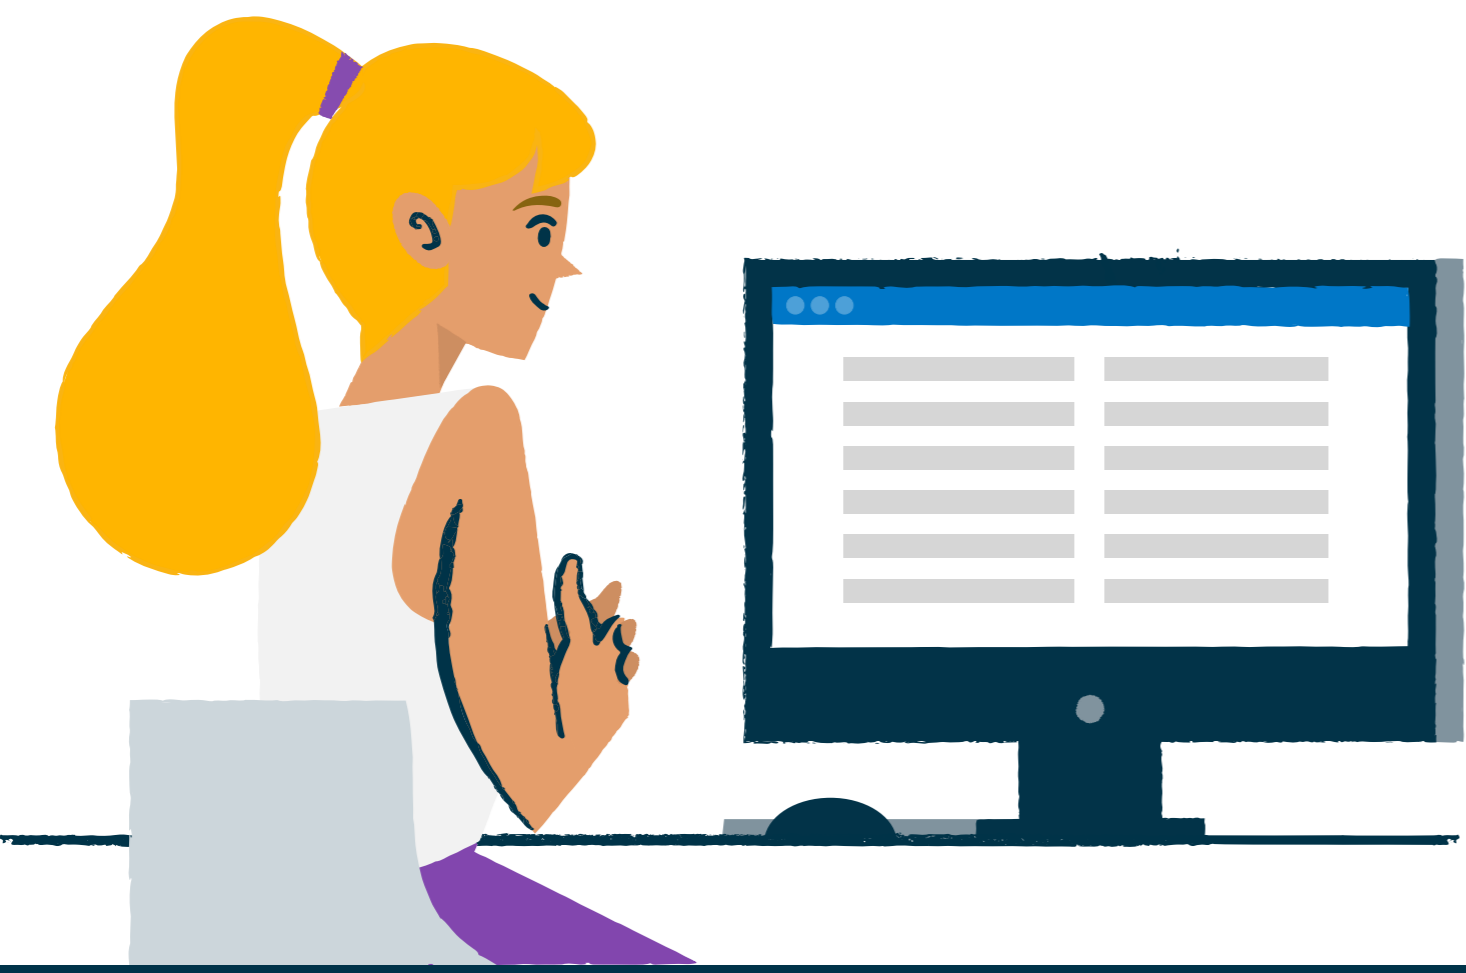

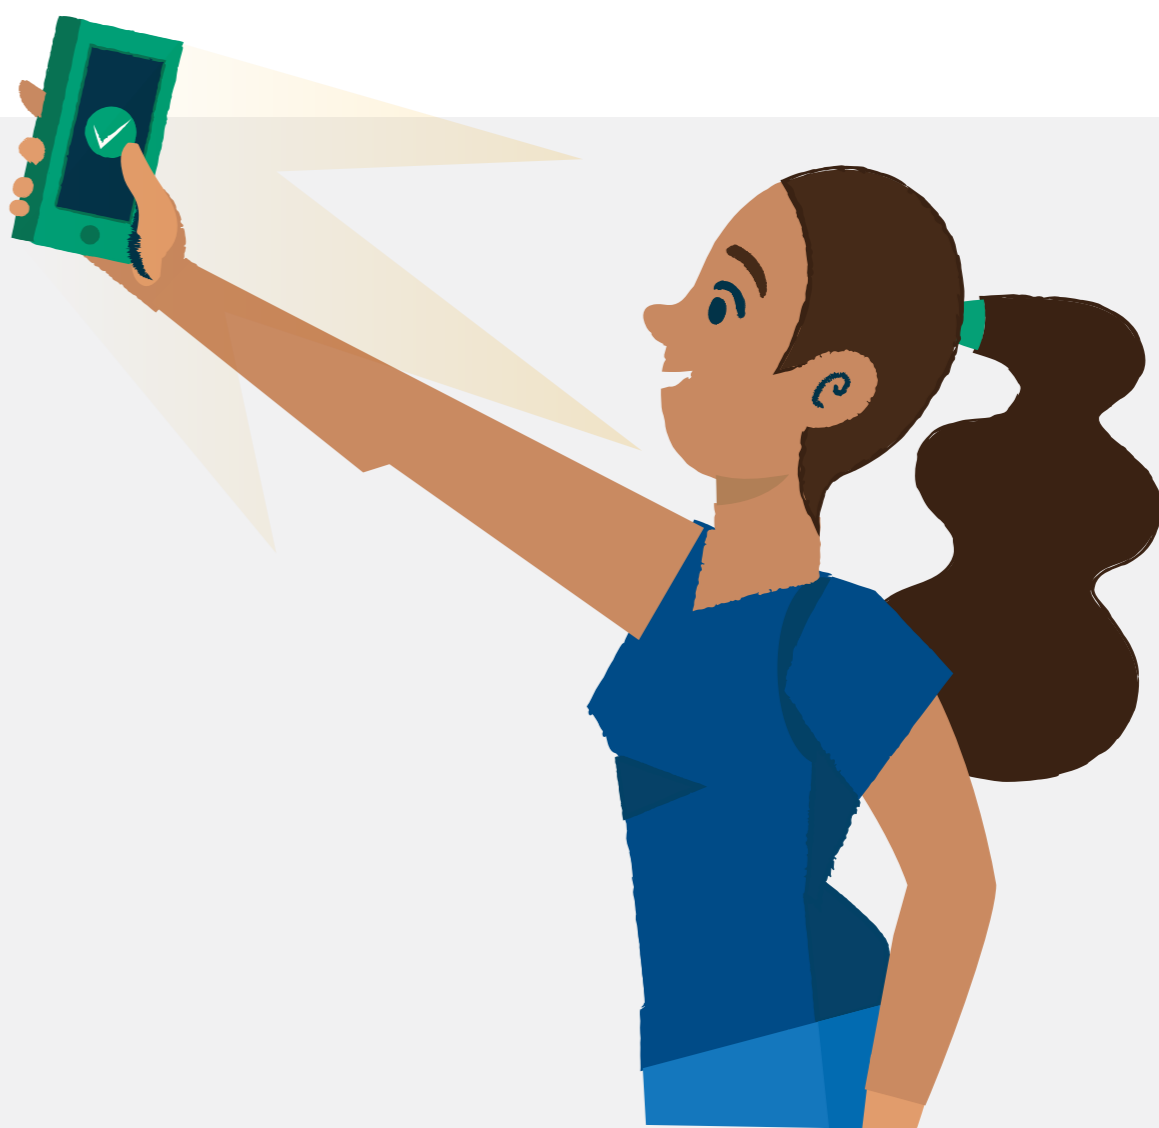

3 After review and approval, you post summary journals to Sage Accounting

4 When payouts, sales, and fees balance to bank records, you know the numbers are right

5 A2X and Sage Accounting turn those tasks that took hours each month into minutes

A2X users save up to **20 hours** of manual accounting work every month
