

Sage X3 Data & Analytics

Complementary Solutions

Create a competitive advantage for your business by implementing customized and integrated Sage X3 solutions.

Discover the array of possibilities Sage X3 complementary solutions offer to match your specific needs.

Sage X3 Data & Analytics provides users with a hub for managing information from all sources, and built-in data models for reporting. Sage X3 users can report on data from multiple sources, including Sage X3 core financials, production and supply chain management applications, Salesforce applications, complementary ISV solutions and virtually any connected data source.

The solution incorporates pre-built data models from other Sage and competitive ERP platforms. This enables you to keep extensive insight into data from previous system as you switch to Sage X3, without the need to manually map data to the new database model or transfer all of your historical data into the new Sage X3 live transactional database.

Benefits

- Gradually migrate to Sage X3 from one or multiple legacy systems, without losing insight into historical data
- Report on data from multiple internal and/or external sources within on system and interface, and make better informed decisions
- Quickly analyze data in personalized dashboards within the Sage X3 user interface
- Capitalize on the BI applications already in use for data representation and analysis or select a new BI software application

Features

- Governed data management, modeling, and visualization web application
- Integrates naturally with the Sage X3 platform with rapid deployment, unlike other solutions requiring custom integrations with your ERP platform
- Delivers pre-built data models that can be easily customized and offers predefined calculations, analytics and a gallery of role-based dashboards that you can use instantly
- Optional BI visualization application for analyzing and reporting on information from your data management hub or other leading self-service BI tools
