

# Sage Intacct Clinical eProcurement

Streamline your entire procurement process while saving time and reducing errors.

Healthcare organizations often struggle with managing a complex medical supply chain and maintaining continuous transactions with suppliers. Without an efficient system, it can be challenging to log transactions accurately, avoid errors, and control procurement costs. Sage Intacct Clinical eProcurement addresses these challenges by simplifying the entire procurement lifecycle, allowing purchasing teams to manage, verify, and complete the procurement process seamlessly within the financial system.

## **Streamline your medical procurement process**

Access supplier catalogs from large volume healthcare vendors directly on the vendor's site from within Sage Intacct, eliminating the need to create manual purchase orders. This lets healthcare professionals quickly find and order supplies without leaving the Sage Intacct platform. Automatic data transfer between Sage Intacct and supplier shopping carts reduces errors and ensures order consistency across platforms to speed up the entire purchasing process and reduce the time spent on procurement tasks. This affords your staff more time to focus on patient care and other critical activities.

## **Control spend with negotiated pricing and strategic budget allocation**

Custom pricing from the vendor's website is accessible from within Sage Intacct, ensuring you always get the best prices. Real-time access to prices and inventory helps you make informed decisions and better manage your budget. This transparency prevents over-ordering and reduces excess inventory costs. By minimizing manual tasks, you can reallocate staff to strategic activities, enhancing operational efficiency and saving money.

## **Benefits for both the purchasing and finance team**

The Sage Intacct Clinical eProcurement setup requires no coding for supported vendors, allowing for quick deployment with minimal disruption. Users can easily browse supplier catalogs, add items to their cart, and transfer the cart back to Sage Intacct for processing and approval. This user-friendly interface enhances user adoption and streamlines procurement. The increased visibility between purchasing and finance teams improves communication and ensures alignment with financial policies and budgets, fostering a more efficient and cohesive working environment.
